

## Oregon Statewide Criteria for Collective Notifications

---

The information shared by Collective platform users in the **Care Team, Care History, Care Guidelines, and Security and Safety** sections is included in Collective notifications to hospitals on the Collective platform when the patient presents.

Collective notifications are not sent to hospitals for every patient admitting, but are triggered based on agreed-upon statewide criteria (and any additional hospital-specific criteria as requested by a hospital):

- Patient has Insights (consisting of Care Guidelines/and or Care History Items
- Travelling patients: ED visits at 3 different hospitals in 60 or 90 days
- 5 ED visits in 12 months
- Patient has a Security and Safety Event recorded in the platform
- PDMP (for those hospitals that have been credentialed for PDMP)\*

\*PDMP (Prescription Drug Monitoring Program): There are six unique criteria that were originally developed by the State of Washington and have been adopted by the Oregon College of Emergency Physicians (OCEP) for application across all PDMP connections to Collective notifications in the state. The following criteria will trigger a PDMP report through a Collective notification:

1. Three (3) or more prescribers within 12 months;
2. Four (4) or more controlled substance II – V prescriptions within 12 months;
3. Two (2) or more controlled substance II – V prescriptions within last 40 days;
4. Any prescription for Methadone, Suboxone, fentanyl transdermal, LA morphine, and LA oxycontin within last 6 months;
5. Any overlapping prescriptions for narcotics (controlled substance II-V) and benzodiazepines within last 6 months;
6. More than 90 average MED (morphine equivalents)/day prescribed within the last 15 days

The PDMP report is triggered for a patient who meets one or more of the above 6 criteria. The PDMP report then populates as a distinct segment of the Collective notification and includes a 6-month overview of that patient's prescription history.
